

# How to Create a Post on Facebook

## Quick Start Guide

### Overview

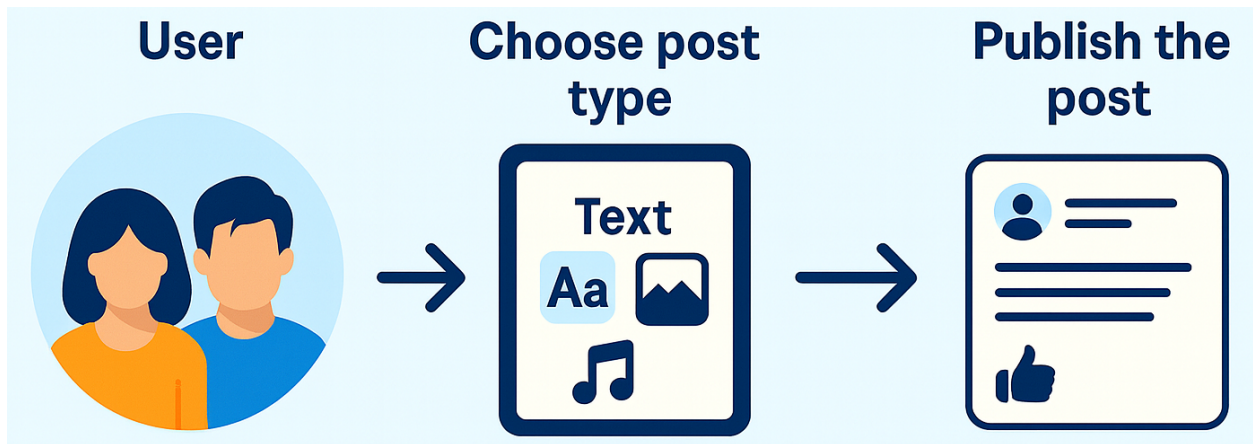

Facebook allows you to create posts to share updates with your friends, family, or followers. This quick start guide explains how to create posts from both the web browser and the mobile app.

This guide helps you perform the following actions:

- Create a text-only post
- Share an image or video
- Share a life event
- Tag friends in a post

### Facebook post creation flow

This image shows how the post creation flow works.

### Target audience

This guide is intended for experienced Facebook users who are already familiar with the platform and need quick instructions to create posts.

### Before You Get Started

Before creating a post on Facebook, ensure you have the following:

- Facebook account
- Internet access
- Device with a web browser or the Facebook mobile app installed

### Creating a Post from Web Browser

You can create a post directly from the Facebook website using a desktop or laptop.

#### Prerequisites

- Supported browser
- Supported media files in device storage

To create a post,

1. On your browser, open Facebook.

2. Perform one of the following options:
  - At the top of the Home page, select the What's on your mind? text box.
  - On your Profile page, select the What's on your mind? text box.

Create post window opens.

### **Create a Text-only Post**

A text-only post allows you to share updates or thoughts in the text.

#### **Prerequisites**

Internet connection

To create,

1. On the Create post page, enter your text in the editor.
2. Select Post.

The text-only post is published and visible on your timeline.

### **Share an Image**

You can share one or more images with your post to share visual updates.

#### **Prerequisites**

- Supported image file
- Image stored on your device

To share,

1. On the Create post page, select Photo/video.
2. Select an image file from your device.
3. Select Post.

The image post is published in your feed with the attached photo.

### **Share a Video**

Video posts help you share stories, tutorials, or updates.

#### **Prerequisites**

- Supported video file
- Video stored on your device

To share,

1. Perform any one of the following steps:
  - On the create post page, select any of the following:
    - Photo/video
    - Live video
  - On the home page, select the Gallery icon.
2. Select a video file from your device.
3. Select Post.

The video post is published in your feed.

## **Share a GIF**

GIF posts allow you to share animated images in the post.

### **Prerequisites**

Internet connection

To share,

1. On the Create post page, select GIF.
2. Select a GIF from the list.
3. Select Post.

The GIF post is published and displayed in your feed.

## **Share a Location**

You can share your current location or a specific place as part of your post.

### **Prerequisites**

- Location services are enabled on your browser.
- Facebook has permission to access your device location.

To share,

1. On the Create post page, select Check in.
2. Select the location from the list.
3. Select Post.

The location post is published and displayed in your feed with the selected place.

## **Share a Life Event**

Life events highlight major milestones, such as starting a new job, moving, or family updates.

### **Prerequisites**

- Facebook profile information
- Internet connection

To share,

1. On the Create post page, select Life event.
2. Select a category like Life, Education, Relationship, Family, or Travel.
3. Enter the required details.
4. Select Post.

The life event post is published and highlighted on your profile.

## **Share a Feeling or Activity**

You can share your current mood and activity as a post or along with your post.

### **Prerequisites**

Internet connection

To share,

1. On the Create post page, select Feeling/activity.
2. From the list, select your feeling or an activity.
3. (Optional) Enter text or attach media to your post.
4. Select Post.

The post is published with the selected feeling or activity.

(Optional) You can add captions, emoji, text or Tag Friends in all the posts.

## **Creating a Post from Mobile App**

You can create posts using the Facebook mobile app on your phone or tablet.

### **Prerequisites**

- Updated version of Facebook
- Phone or tablet with internet connection
- Supported media files in device storage

To create a post,

1. On your mobile, open Facebook.
2. Perform one of the following steps:
  - On the Home screen, tap What's on your mind? text box.
  - On the Home screen, tap Create (+) and select Post.
  - On your Profile page beneath your profile details, tap What's on your mind? text box.

Create post screen opens.

### **Create a Text-only Post**

A text-only post lets you quickly share thoughts, reminders, or updates.

### **Prerequisites**

- Internet connection
- Android version 6.0+ or iOS version 13.4+

To create,

1. On the Create post screen, type your text in the editor.
2. Tap Post.

The text-only post is published and visible on your feed.

## **Share an Image**

You can upload an image from your phone gallery or take a photo, to share visual updates.

### **Prerequisites**

- Supported image file
- Image stored on your device
- Internet connection
- Android version 6.0+ or iOS version 13.4+

To share,

1. Perform any one of the following steps:
  - On the Create post screen, select one of the following:
    - Photo/video
    - Camera
  - On the Create post screen, tap AI images.
  - On the home page, tap Gallery icon.
2. Select an image.
3. Tap Post.

The image post is published and displayed in your feed.

## Share a Video

Videos allow you to share events, tutorials, or stories directly from your phone.

### Prerequisites

- Supported video file
- Video stored on your device
- Internet connection
- Android version 6.0+ or iOS version 13.4+

To share,

1. Perform any one of the following steps:
  - On the create post screen, select any of the following:
    - Photo/video
    - Camera
    - Live video
  - On the top of your home screen, tap Gallery icon.
2. Select or record a video.
3. Tap Post.

The video post is published and visible in your feed.

## Share Music

You can share a music track directly in your post.

### Prerequisites

- Internet connection
- Android version 6.0+ or iOS version 13.4+

To share,

1. On the Create post screen, tap Music.
2. Select a track from the list.
3. Tap Post.

The music post is published and displayed in your feed.

## Share a Location

You can share your current location or a specific place as part of your post.

### Prerequisites

- Location services are enabled on your Phone.
- Facebook has permission to access your device location.

To share,

1. On the Create post screen, tap Check in.
2. Select the location from the list.
3. Tap Post.

The location post is published and displayed in your feed with the selected place.

## Share a GIF

GIF posts allow you to share animated images in the post.

### Prerequisites

- Internet connection
- Android version 6.0+ or iOS version 13.4+

To share,

1. On the Create post screen, tap GIF.
2. Select a GIF from the list.
3. Tap Post.

The GIF post is published and displayed in your feed.

### **Share a Life Event**

Life events highlight major milestones, such as starting a new job, moving, or family updates.

#### **Prerequisites**

- Internet connection
- Android version 6.0+ or iOS version 13.4+
- Facebook profile information

To share,

1. On the Create post screen, tap Life event.
2. Select a category like Life, Education, Relationship, Family, or Travel.
3. Enter the required details.
4. Tap Post.

The life event post is published and highlighted on your profile.

### **Share a Feeling or Activity**

You can share your current mood, activity, or status update as a post or along with your post.

#### **Prerequisites**

- Internet connection
- Android version 6.0+ or iOS version 13.4+

To share,

1. On the Create post screen, tap Feeling/activity.
2. From the list, select a feeling or an activity.
3. (Optional) Enter text or attach media to your post.
4. Tap Post.

The post is published with the selected feeling or activity.

(Optional) You can add captions, emoji, text or Tag Friends in all the posts.

### **Tag Friends**

Tagging allows you to include friends in your post so they are notified.

#### **Prerequisites**

- Internet connection
- The friend you want to tag is in your Facebook friends list.

To tag,

1. On the Create post page, select the post you want to share.
2. At the bottom of the screen, select Tag people.

3. Select the names from the list.
4. Select Post.

The post is published, and your tagged friends receive a notification.

## **Troubleshooting**

Use the following solutions if you face issues while creating a post on Facebook:

### **Unable to upload images or videos**

- Check your internet connection.
- Verify that the file size and format are supported like JPEG, PNG, and MP4.
- Try uploading from a different browser or update the Facebook app.

### **Post not visible after publishing**

- Check your audience settings like Public, Friends, or Group.
- Review Facebook's community standards to ensure the post complies with policies.
